Hey – not yet. I will have at least some of the same comments on the ARARs, in that DOE did not identify the state narrative water quality standards as RAR to radionuclides. We haven't talked through it, though. For pollutants, we don't cross-reference a narrative requirement to a particular pollutant. I wasn't expecting that we would do so for radionuclides. But perhaps we have/need to parse it more particularly, since it is RAR. Again, it doesn't seem necessary, but we can talk about it.

I'm only really starting my ROD review today because last week was mostly gobbled up with other tasks.

Attached are my comments – do you have specific comments on the ARARs table?
